Meet the friends

A friendly addition to the home

Air Quality Sensor - How's the air?

Are you worried that the air quality in your home is not well? This friend will let you know when to open a window and get some fresh air inside. The wireless Air Quality Sensor monitors the organic chemicals present in indoor air (the VOC levels), humidity levels, and the temperature at home. The friendly sensor is battery-powered and warns you if the indoor air quality gets bad.

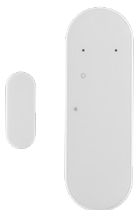

Smart Humidity Sensor - Too wet or too dry?

Who is watching out for your well-being and protecting your belongings against damaging conditions? The Zigbee-based Smart Humidity Sensor monitors the level of humidity and the temperature in a room. Don't spend time worrying about your beloved paintings or inherited belongings in your basement – your friend is looking out for them.

Motion Sensor Pro - Always a friend at home

Imagine always having a friend looking after your home. The Zigbee-based Motion Sensor Pro lets you detect movement, light, and temperature – all in one. It looks after your home and loved ones if you're not there, sends you a notification if something is wrong, and helps you automate your everyday life.

Entry Sensor Pro - Open, close, open

Place the Zigbee-based Entry Sensor Pro on a door or a window, and it'll start tracking when it's opened and closed. You'll have peace of mind, knowing that your home is safe - no matter if you are at home or away. The friendly sensor lets you know if you forgot to close a window before leaving your house. It also checks the temperature of the room.

Intelligent Smoke Alarm - More than beep beep

Beep... Beep... Beep... The Zigbee-based Intelligent Smoke Alarm helps protect your home from fire, no matter where you are. This is a friend with a great volume. It's someone who also warns you when you're far from home where even the loudest smoke alarm will have to give up. The Intelligent Smoke Alarm is battery-powered and easy to install.

Intelligent Heat Alarm - Fire or just smoke?

Imagine having a friend protecting you against fire at all times. The Zigbee-based Intelligent Heat Alarm detects rapidly increased levels of heat and will alert you if it detects fire – not if it's just smoke or dust. In case of fire in your home, the wireless alarm warns you instantly. You'll hear loud beeps and get a notification, allowing you to act right away.

Water Leak Detector - No more drip drip

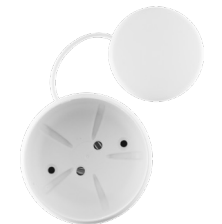

Put the Zigbee-based Water Leak Detector on the floor anywhere there's a risk of leakages or flooding, and you won't doubt if it detects water. This is a loud little friend! The Water Leak Detector also sends you a notification. Feel at ease, knowing that your friend is watching your home at all times – even when you're not at home.

Water Leak Detector Probe

- Detect hidden leakages

Detect hidden leakages before they can do any damage by extending the friend Water Leak Detector with the Water Leak Detector Probe. It can reach even in the narrowest places of your home. This friend requires the friend Water Leak Detector, it is not a stand-alone device.

Meet the friends

A friendly addition to the home

Smart Plug Mini 2 - On, off, on, off

The Smart Plug Mini 2 lets you remote control and automate your appliances and track their electricity consumption - all in one. It's a small but versatile Zigbee switch that connects your appliances to your smart home. You just need to plug it in a power socket and connect your electrical appliance. Easy, right?

Type F (Schuko)

Used in: Germany, Greece, Hungary, Indonesia, Italy, Luxembourg, the Netherlands, Norway, Russia, Spain, and Sweden.

Type E (French)

Used in: Belgium, Czech Republic, France, Poland, and Slovakia.

Type G (British)

Used in: UK, Ireland, Hong Kong, Malaysia, Qatar, Saudi Arabia, Singapore, and United Arab Emirates.

EMI 2, LED - Become energy-aware

Easily keep track of your electricity consumption and identify peaks to help reduce your consumption. Mounted on your electricity meter, this friend keeps you informed about your electricity consumption on your smartphone via a compatible hub. And don't worry - you don't need professional help to install it. You can easily do it by yourself.

Smart Siren - Be safe and sound

The Smart Siren is a highly advanced device with a siren and range extender in one. The smart home siren can make loud sounds to scare away intruders from entering your home. With the range extender functionality, the Smart Siren enables your smart home system to cover larger areas and allows you to include more devices.

Intelligent Keypad - A friendly welcome home

Mount the Intelligent Keypad by your front door and use your pin code to enter your home by connecting the Zigbee based keypad to your smart door lock via a compatible hub. The Intelligent Keypad ensures secure and keyless entry. The Intelligent Keypad illuminates in the dark, making it easier for you to enter your home during nighttime.

Smart Cable 2 - Power off, save money

This is a friend who wants your everyday life to be greener. The Zigbee-based Smart Cable 2 is an electricity usage tracker and a remote switch. Connect it to the cord of your electric radiator, fan, or another electrical appliance, and it's ready to monitor the consumption. The Smart Cable 2 also lets you turn the appliance on and off remotely.

Smart DIN Relay 2 - Gain control, be energy smart

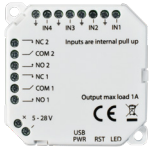

With the Smart DIN Relay 2 mounted on your DIN rail by qualified electrical personnel, you can switch on and off anything connected to an electrical circuit of your home remotely. You can also track the electricity consumption of the appliances connected to the circuit. The Smart DIN Relay 2 includes overload and temperature protection.

A friendly addition to the home

IO Module - Bring your wired devices online

With the friendly IO Module, you can connect your wired devices to your smart home. Connect devices to the inputs to trigger events. By connecting them to the outputs, you can enable appliances to respond to events.

Smart Button - One click fits all

With this frient, you can control your home through a simple push of a button. Set up automations for your home and use the button to turn off all lights from your bed or activate an at home automation. You can also use the Zigbee-based button as a doorbell or to turn on an alarm mode. This frient is waterproof and thus suited for indoor and outdoor use.

Become a distributor

The frient product portfolio is based on more than 10 years of experience in developing Zigbee-based IoT devices.

Over the years, more than 3.5 million products have been deployed under various brands.

With the frient brand, you can sell reliable and stable products that are based on proven technology and ensure happy customers.

All frients communicate via Zigbee, providing secure and reliable communication with smart home hubs.

Join the club of 70+ distributors selling the frient devices.
